PROFILE

Computer Science (Fast-Track) graduate holding a Bachelor's degree in Database Technology (GPA 3.92) and an incoming Master's graduate in Information Security Management (GPA 3.99; awaiting graduation). Strong foundation in data analytics, business intelligence, data science, data engineering, and information security-aware data practices.

Experienced in financial services and logistics operations through HR Data Scientist, Reporting Analyst, and Data Analyst roles. Specializes in workflow automation, predictive modeling, and cross-functional data process improvement.

EXPERIENCES

Data Analyst - Business Process Outsourcing (BPO) Management Division

February 2026 - April 2026

Shopee (SPX) Express (Full-Time)

- Built and automated the first First Mile fulfillment report using Google Sheets, Apps Script, Python, and Deepnote, enabling independent operational intelligence for Ramadan Campaign monitoring and management decision-making.
- Maintained and revamped nationwide Last Mile hiring trackers across 9 regions and 4 operational stages, covering registration, vendor validation, new hire release, and account creation workflows.
- Managed and troubleshooted 53 Python-based automation scripts across Middle Mile and Last Mile operations; migrated 22 scripts from Deepnote to Hex to mitigate 'Error 503/429' service disruptions and maintain operational SLA continuity.
- Supported the setup of a GCP-based automation environment from scratch, including Ubuntu VM provisioning, script deployment readiness, and cron scheduling to improve scalability beyond spreadsheet-based workflows.
- Supported cross-functional logistics and fulfillment initiatives, including Loss & Damage credit scoring go-live support, telesales-to-account creation data issue resolution, non-courier fulfillment tracker management, and time-study/FTE analysis for workload planning.

Reporting Analyst Intern - Risk Management Division

July 2024 - September 2024

Toyota Astra Financial Services (Extended)

- Participated in building enterprise-level Risk Dashboards, involving heavy semantic modeling. Created 100+ DAX measures for performance monitoring across sales, services, and accounts receivable.
- Translated and reverse-engineered Hadoop HiveQL/SQL table definitions into DAX-compatible logic for Power BI.
- Converted 20+ Tableau dashboards into Power BI by refactoring Tableau calculations and expressions into DAX measures.
- Configured ODBC to Power BI scheduled refresh, role-level access control, and ensured thorough data reconciliation of all risk monitoring dashboards before go-live.
- Learned operational processes of credit risk, operational risk, financial early warning indicators, and regulatory requirements (POJK 44, UU PDP, COSO Framework, ISO 27001, ISO 9001, ISO 36001).

Data Scientist Intern - Human Resource & General Service Division

February 2024 - June 2024

Toyota Astra Financial Services (MSIB - Kampus Merdeka)

- Designed a predictive recruitment system (Python + Django), including feature engineering, model training, and UI for HR decision-making.
- Built 7+ analyst- and manager-level Power BI dashboards from scratch, covering multiple HR departments: recruitment, people development, incentives, training, and organizational development.
- Conducted requirement gathering, extensive data cleaning, DAX modeling, and executive presentations.
- Automated data ingestion workflows with Excel VBA macros to streamline Training Dept. reporting and reduce manual workload across multiple employees' training and certification records.
- Collaborated closely with HR analysts to introduce people analytics thinking ahead of HR information system adoption.

EDUCATION

Master's - BINUS Graduate Program

September 2024 - August 2026

- Computer Science Fast Track Program, Streaming: Information Security Management - (GPA 3.99)
- Thesis Title: "Multivariate Deep Learning with Uncertainty Quantification to Enhance Stock Index Price Prediction Interpretability." Awaiting graduation, expected in August 2026.

Bachelor's - BINUS University

September 2021 - August 2025

- Computer Science Undergraduate Program, Streaming: Database Technology - Summa Cum Laude (GPA 3.92)
- Thesis Title: "A Hybrid Time-Series Decomposition-Based Framework using LSTM-SARIMAX for Stock Price Forecasting"

High School Diploma - SMA Regina Pacis Bogor

July 2018 - July 2021

Math and Natural Science - Best Student (Grade: 93.47)
