

Alden Ardiwinata Putra

Computer Science Master's Student

Jakarta, Indonesia | +6281286906326 | alden.aputra@gmail.com

Portfolio: aldenaputra.vercel.app

PROFILE

Final-year Master's student in Computer Science (Fast-Track Program, GPA 4.00), specializing in Information Security Management, alongside a Bachelor's degree in Computer Science: Database Technology (GPA 3.92). Strong foundation in data science, analytics, and data engineering, with growing emphasis on securing and managing information systems.

Completed two analytics-focused internships (HR Data Scientist & Reporting Analyst) involving Django predictive web modeling, Power BI dashboard development, SQL/HiveQL-to-DAX translation, workflow automation, Tableau migration, and risk monitoring with advanced DAX measures.

EXPERIENCES

Reporting Analyst Intern - Risk Management Division

July 2024 - September 2024

Toyota Astra Financial Services (Extended)

- Participated in building enterprise-level Risk Dashboards, involving heavy semantic modeling. Created 100+ DAX measures for performance monitoring across sales, services, and accounts receivable.
- Translated and reverse-engineered Hadoop HiveQL/SQL table definitions into DAX-compatible logic for Power BI.
- Converted 20+ Tableau dashboards into Power BI by refactoring Tableau calculations and expressions into DAX measures.
- Configured ODBC to Power BI scheduled refresh, role-level access control, and ensured thorough data reconciliation of all risk monitoring dashboards before go-live.
- Learned operational processes of credit risk, operational risk, financial early warning indicators, and regulatory requirements (POJK 44, UU PDP, COSO Framework, ISO 27001, ISO 9001, ISO 36001).

Data Scientist Intern - Human Resource & General Service Division

February 2024 - June 2024

Toyota Astra Financial Services (MSIB - Kampus Merdeka)

- Designed a predictive recruitment system (Python + Django), including feature engineering, model training, and UI for HR decision-making.
- Built 7+ analyst- and manager-level Power BI dashboards from scratch, covering multiple HR departments: recruitment, people development, incentives, training, and organizational development.
- Conducted requirement gathering, extensive data cleaning, DAX modeling, and executive presentations.
- Automated data ingestion workflows with Excel VBA macros to streamline Training Dept. reporting and reduce manual workload across multiple employees' training and certification records.
- Collaborated closely with HR analysts to introduce people analytics thinking ahead of HR information system adoption.

PROJECTS

OWASP WSTGv4.0 Automated Scripting and Reporting - Fundamental of Cybersecurity, Master's Project

- Developed an automation framework (Pyshark, Python, OpenRouter) executing the complete OWASP WSTGv4.0 checklist with a generated vulnerability report. ([github](#))

Cybersecurity Practical Case Studies - Network and Cybersecurity Master's Project

- Performed a series of practices and hands-on cybersecurity cases and compiled general reports: (1) penetration test on the Kioptrix engine using Kali Linux, (2) Cridex malware memory forensics using Volatility, (3) TLS/SSL decryption using Wireshark, and (4) Pyshark for CLI-based traffic inspection and report generation. ([documentation](#))

SVM Kernel Comparison (Aviation Dataset) - Data Mining, Bachelor's Project

- Performed a full Knowledge Discovery in Database pipeline and evaluated four SVM kernels to analyze passenger satisfaction, model performance, and permutation importance. ([github](#))

EDUCATION

Master's - BINUS Graduate Program

September 2024 - August 2026 (Expected)

- Computer Science Fast Track Program, Streaming: Information Security Management - (Current GPA 4.00)
- Ongoing Thesis Title: "Multivariate Deep Learning (GRU, LSTM, TCN, Transformer) with Uncertainty Quantification (Monte Carlo Dropout, Heteroscedastic NLL + Last-Layer Laplace Approximation, Ensemble Conformal Quantile Regression) to Enhance Stock Index Price Prediction Interpretability"

Bachelor's - BINUS University

September 2021 - August 2025

- Computer Science Undergraduate Program, Streaming: Database Technology - Summa Cum Laude (GPA 3.92)
- Thesis Title: "A Hybrid Time-Series Decomposition-Based Framework using LSTM-SARIMAX for Stock Price Forecasting"

High School Diploma - SMA Regina Pacis Bogor

July 2018 - July 2021

Math and Natural Science - Best Student (Grade: 93.47)
